Steps to Connect to GC Wireless

The following are instructions for connecting to the guest wireless at Greensboro College. The guest wireless should be used for people needing temporary access to the wireless at Greensboro College. The following steps are for a Windows XP Wireless Controlled Environment but will provide you an example for connecting to the guest wireless.

STEP 1

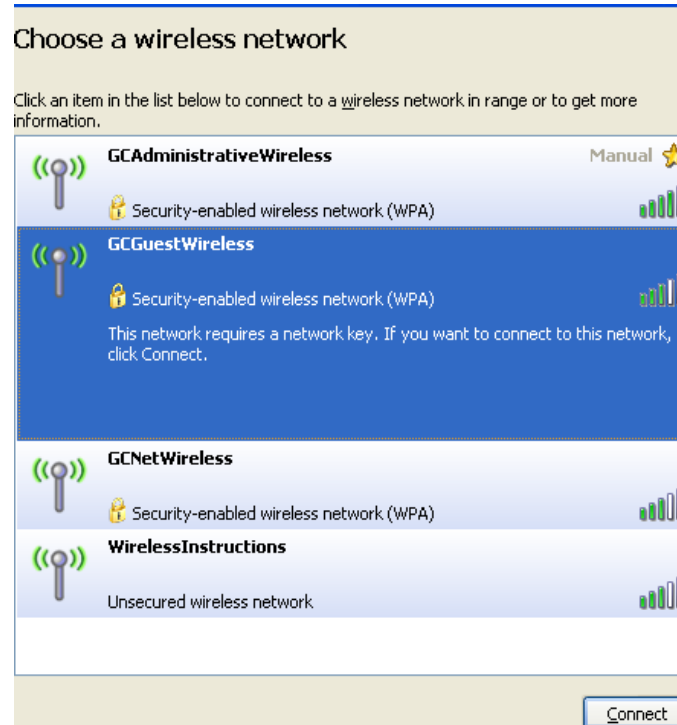

First you will need to bring up the wireless connection screen. For the Windows controller setup there should be an icon in the lower part of your screen (as seen below). RIGHT Click the icon, and choose View Available Wireless Networks.

ICON TO CLICK:

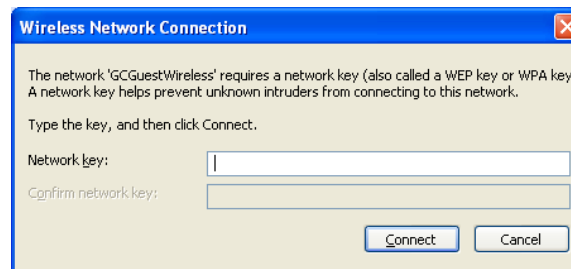

STEP 2

Selecting view available wireless networks will bring a box up like below. On this screen you want to select GCGuestWireless and then click connect:

STEP 3

After you select the GCGuestWireless and click Connect, it will bring up a box like this:

You will need to put in a Network Key to connect to the guest wireless network. This network key is available from whomever is supporting your group's functions at Greensboro College. Enter the network key in each box and click connect. After doing this you will be connected to Greensboro College's wireless network and you can access the internet and other online content.

Again, these are generic instructions for connecting to the guest wireless. If your wireless settings are configured differently from these instructions, you will need to tell it to connect to GCGuestWireless and enter the network key provided by whomever is supporting your group's functions.
